NEWS RELEASE

Release Date: March 3, 2002 (Toronto, Ontario)

RE: Edac Releases New Line of DVI Connectors

Edac Inc., a global leader in the design and manufacture of board level interconnect products, expanded its broad offering of I/O connectors by introducing their new line of DVI (Digital Visual Interface) connectors to their connector lineup.

A single connector solution, DVI connects a host device and display device to support any high resolution video application. As the graphics industry pushes technology to the next level, DVI is leading the way in the I/O interface supporting both digital and/or analog video functions.

The B10 series of DVI connectors provides a single high performance interface, saving premium board space, while also supplying the added benefits of higher speed and higher resolution. This solution saves both time and money, while opening up the path to future technologies.

The new series offers contact plating from Gold flash to 30 micro-inches of gold in vertical, right angle and solder terminal configurations with various mounting and grounding options.

About Edac Inc.

Headquartered in Markham, Ont, Edac Inc. (www.edac.net) has been one of the leaders in the design; engineering and manufacturing of standard and custom interconnect solutions for over 40 years.

Edac provides high quality, and cost effective solutions to fortune 100 companies across a broad range of industrial, commercial, and consumer product manufacturers.

Edac has offices in North America and Europe. Edac connectors and custom solutions are offered through a global network of sales representatives and distributors.
